# Mountain 52Hz Framebag Templates

## Instructions:

1. Make sure template is printed at 100% scale, double check by measuring ruler on paper.
2. Cut away printer margins with scissors to line up ✂ crop marks. It's more important to accurately match crop marks then to cut away margins in straight lines.
3. Tape pages together. The finished template should look like the image to the left.
4. Place template inside bike frame to see what size fits best. The template does not need to perfectly match your frame. The framebag design allows for a wide range of acceptable frames shapes.
5. Order at [rockgeist.com](http://rockgeist.com) (visit product page by taking photo of QR code)
